

## Important notice

No mixing of Aisin and Delphi components on one engine!

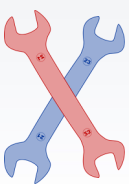

**When replacing timing chain sets, an important detail must be observed.**

Before you install the timing chain kits from AIC with the numbers 59507Set and 59508Set in your engine, make sure which manufacturer has already installed the individual components regarding the variable camshaft phasing (VVT) in your vehicle.

There are two different manufacturers of timing chain sets. Tsubaki and BorgWarner. All timing chain drive components of these manufacturers such as timing chains, slide and guide rails, chain tensioners, camphasers and solenoid valves for camshaft phasing must not be mixed with each other.

- » The timing chain set from Iwis with the AIC part number 59507Set is compatible with components from Tsubaki or the camshaft timing system from Delphi.
- » The timing chain set from Iwis with the AIC part number 59508Set is compatible with components from BorgWarner or the camshaft adjuster from Aisin.

In general, mixing between VVTs from Delphi and VVTs from Aisin on one engine is not allowed.

## AIC-TIPP

To make sure that you have selected the correct timing chain set for your engine, please have a look at the [partslink24](#). There, all suitable manufacturers are assigned to the components.
