

## Front shock absorbers

Fiat Doblo (ZFA223)

FI132EU

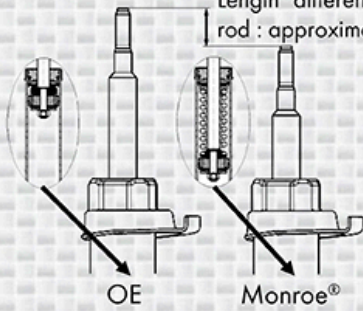

Particularity of the front shock absorbers ref. 16470

Length difference of the relaxed rod : approximately 70mm

In order to ensure a better quality and better longevity, Monroe® brings improvements in the manufacturing process of these shock absorbers : inner buffer is substituted by a rebound spring.

Because of this improvement, Monroe® shock absorbers have the same technical characteristics, except the length of the rod (relaxed shock absorbers).
