PRODUCT INFORMATION

FOUR NEW WATER PUMP MODULES FOR MERCEDES-BENZ M270 AND M274

Motorservice has added four new Pierburg water pump modules to its aftermarket range. With six Pierburg products, Motorservice now covers all water pumps for the 1.6-l and 2.0-l petrol turbocharged engines (M270 and M274) from Mercedes-Benz. The water pumps operate as and when needed, thus helping to save fuel and comply with applicable exhaust emission standards.

During the warm-up phase, the water pump module is switched off by a vacuum valve. This enables the engine to be heated more quickly and fuel-saving systems can be activated promptly, e.g. the start stop system. In addition, the water pump module is switched on by the heating and air conditioning system if required, so that the interior of the vehicle is heated up more quickly, among other things.

Pierburg no.	Version	Engine	Ref. no.
